Zen Watermakers

All components are integrated in the main manifolds and there are very few external components like fittings, pipe, valves.

These features make the Zen watermakers **very compact**, with a special ultra-flat design. Zen in fact is **designed to fit into tight spaces** and can be installed in every positions, horizontally as well as vertically. Not much bigger than a briefcase!

The Zen are fitted with new generation Energy Recovery Systems that reduce the electric consumption to a minimum.

Zen technology is patented.
